

PERFORMANCE REVIEW REPORT

ISLA OWEN - MAY 2026

Generated via Tonbridge Swimming Analytics Engine

PERSONAL PERFORMANCE STORY

MOMENTUM

Velocity: Decelerating (-16). You have converted training into 9 lifetime Personal Bests this season. Recent racing outputs are below baseline; technical reset required.

WORKLOAD

Training Consistency: You have met the squad criteria in 17 out of 46 swimmable weeks (37%). The club expectation is 75%+. In terms of pure volume, you have completed 418h out of a target 368h. This 0h deficit (approx. 0 missed sessions) directly impacts your aerobic ceiling.

MEETS

Meet Engagement: You have attended 10 Open Meets out of a seasonal target of 8. Excellent competitive engagement.

BENCHMARKS

County Standard: Your Peak (481 pts) is above

the Kent AQT baseline
of 435 pts.

BENCHMARKS

Regional Standard: You
are within 2pts of the
South East Regional
Automatic standard
(479 pts).

FORM

Current Form: Your
recent 90-day average
(388 pts) is stable
relative to your seasonal
baseline (+0 pts).

STROKES

Freestyle: Peak 481 pts.
Target: County (446) |
Regional (515).

STROKES

Breaststroke: Peak 361
pts. Target: County
(442) | Regional (449).

STROKES

Butterfly: Peak 364 pts.
Target: County (408) |
Regional (454).

STROKES

Backstroke: Peak 299
pts. Target: County
(424) | Regional (448).

STROKES

Individual Medley: Peak
380 pts. Target: County
(440) | Regional (502).

COACHING

Coach's Eye:
Performance-Volume
Decoupling: High
volume is yielding
diminishing returns.
Focus on high-quality
recovery and lower-
intensity technical reset.
Freestyle is your
dominant discipline; use
this momentum to set
the pace in training.
Strategic Focus:
Targeted technical
clinics in Backstroke
could significantly
elevate your aggregate
health score.

**TECHNICAL PERFORMANCE
ANALYSIS****DEVELOPMENT**

ENDURANCE- BIASED FREESTYLER FACING AEROBIC VOLATILITY AND SC/LC CONVERSION CRISIS

EXECUTIVE PROFILE

Isla is a 14-year-old Regional-level athlete situated in the 'Training to Compete' LTAD phase. Her profile displays a clear bias toward middle-to-long distance Freestyle (WA 487 in 800m), yet her development is currently throttled by severe training inconsistency.

TECHNICAL REVIEW

Training consistency is the primary technical limiter for Owen. A 37% consistency rate, characterized by a workload fluctuating between 0 and 11 hours per week, prevents the stabilization of the aerobic floor. This volatility is mirrored in her meet temperament; while her peak WA is 487, her Level 3 average sits significantly lower at 382. Without a predictable training impulse, her 'Big Meet' performances rely on residual fitness rather than peaked physiological

adaptation, making regional-to-national progression statistically improbable.

Stroke-specific velocity analysis reveals a stark 'Aerobic Decay' in her secondary strokes. Her 50m Free velocity (1.67 m/s) is competitive, but her 100m Butterfly (1.20 m/s) and 100m Backstroke (1.21 m/s) represent a massive drop-off in power application. The 200m Freestyle velocity (1.40 m/s) vs 100m Freestyle (1.54 m/s) shows a 9.1% velocity drop-off. While acceptable for a 14-year-old, the jump to the 400m (1.35 m/s) shows a further 3.6% decay, suggesting her 200m performance is currently the 'missing link' in her freestyle progression.

A 'Technical Conversion Crisis' is evident when auditing SC vs LC metrics. In the 100m Freestyle, Owen exhibits a 5.3% time increase (1:04.83 SC to 1:08.26 LC), which is significantly higher than the standard 1.5-2.0% expectation for this age group. This indicates a heavy reliance on the push-off and turn phases (SC) to mask deficiencies in mid-pool swimming velocity and stroke rate maintenance. Her wall-skill deductions are high in LC, where the absence of frequent turns exposes a lack of sustainable distance-per-stroke (DPS).

SWOT ANALYSIS

STRENGTHS

Superior endurance ceiling in 800m/1500m events; strong baseline velocity in 50m Freestyle (1.67 m/s).

WEAKNESSES

Extreme training volatility (37% consistency); significant technical decay in non-freestyle strokes (Fly/Back WA <300).

OPPORTUNITIES

Long Course (LC) efficiency gains; maximizing the 'Speed-Endurance' window to bridge the 100m-200m conversion gap.

THREATS

Aerobic decay due to inconsistent attendance; high risk of performance plateauing if 'Short Course Specialist' tendencies aren't corrected.

PREDICTIVE FORESIGHT

"Isla is on track for consistent Regional qualification in 400m and 800m Freestyle. However, her current trajectory suggests a ceiling at the Regional Final level. Transitioning to a National pathway requires a 5% improvement in LC efficiency and a mandatory stabilization of training volume to 85%+ consistency over a 20-week macrocycle."

STRATEGIC RECOMMENDATIONS

- SMART Targets: 100m Free SC <1:03.50; 200m Free SC <2:19.50; 800m Free LC <10:15.00.
- In-Pool Focus: Implement 'LC Simulation' sets (increased stroke count monitoring) and prioritize 5m UDK (Underwater Dolphin Kick) discipline off every wall to bridge the SC/LC gap.
- Dryland/S&C Focus: Prioritize Thoracic Extension and Hip CARs to improve streamline posture and breaststroke kick depth; introduce Core anti-rotation (Pallof Press) to stabilize the 100m/200m rotational power.

POINTS PROGRESSION TREND

Global Average: Benchmarks are averaged across all strokes and distances.
